- Walkthrough

AUTHENTIFIZIERUNG VS. AUTORISIERUNG

AUTHENTICATION

Anonymous User: Hey server, please give me info …
Server: Who are you?
Anonymous User: I am Mike, my password is …
Server: I know a Mike with that password, I believe you. Welcome Mike!

AUTHORIZATION

Mike: Great! Now give me that piece of info
Server: Just a sec…
I‘m sorry Mike, I can‘t. That info is for VIPs only. You are no VIP.

AUTHENTIFIZIERUNG

ABLAUF

CLIENT

1 User types email & password into login form

2 The login button triggers the login process

email
password

user

SERVER

3 The server receives the login request with email & password

4 The server checks the user directory for a match

5 If the user is known, the server notifies the web app that the user is now logged in and sends the user profile.

CODE

CODE

USER LOGIN AND LOGOUT

```
var auth = firebase.auth();

// Login
var user = await auth.signInWithEmailAndPassword(email, password);

// Logout
auth.signOut()
```

CODE

STATE CHANGES

```
firebase.auth().onAuthStateChanged(doSomething);

function doSomething(user) {

    if(user) {
        // A new user signed in
    }
    else {
        // A user signed out
    }
}
```
