AUTHENTIFIZIERUNG VS. AUTORISIERUNG

AUTHENTICATION

Anonymous User: Hey server, please give me info …
Server: Who are you?
Anonymous User: I am Mike, my password is …
Server: I know a Mike with that password, I believe you. Welcome Mike!

AUTHORIZATION

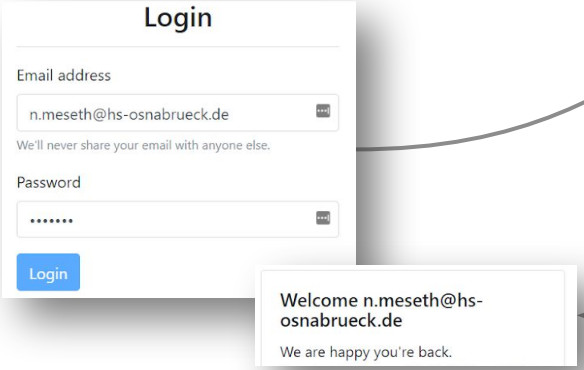
Mike: Great! Now give me that piece of info
Server: Just a sec…
I‘m sorry Mike, I can‘t. That info is for VIPs only. You are no VIP.

AUTHENTIFIZIERUNG

ABLAUF

CLIENT

1. User types email & password into login form



2. The login button triggers the login process

email
password

user

SERVER

3. The server receives the login request with email & password

4. The server checks the user directory for a match

5. If the user is known, the server notifies the web app that the user is now logged in and sends the user profile.

CODE

CODE

USER LOGIN AND LOGOUT

```
var auth = firebase.auth();

// Login
var user = await auth.signInWithEmailAndPassword(email, password);

// Logout
auth.signOut()
```

CODE

STATE CHANGES

```
firebase.auth().onAuthStateChanged(doSomething);

function doSomething(user) {

    if(user) {
        // A new user signed in
    }
    else {
        // A user signed out
    }
}
```
