

# INFORMATION

“Information is that which allows you to make a  
correct prediction with accuracy better than chance.”

Adami, Christoph. “What Is Information?” *Philosophical Transactions of the Royal Society A: Mathematical, Physical and Engineering Sciences*, vol. 374, no. 2063, Mar. 2016, p. 20150230, <https://doi.org/10.1098/rsta.2015.0230>.

“Information is that which allows you to make a correct prediction with accuracy better than chance.”

is it > 7? ✗

with 4 questions from 16 to 1

is it > 8?	✗	}	0
is it > 4?	✓		1
is it > 6?	✓		1
is it > 7?	✗		0

with 4 questions from 16 to 1

where is the information?

# where is the information?

# where is the information?

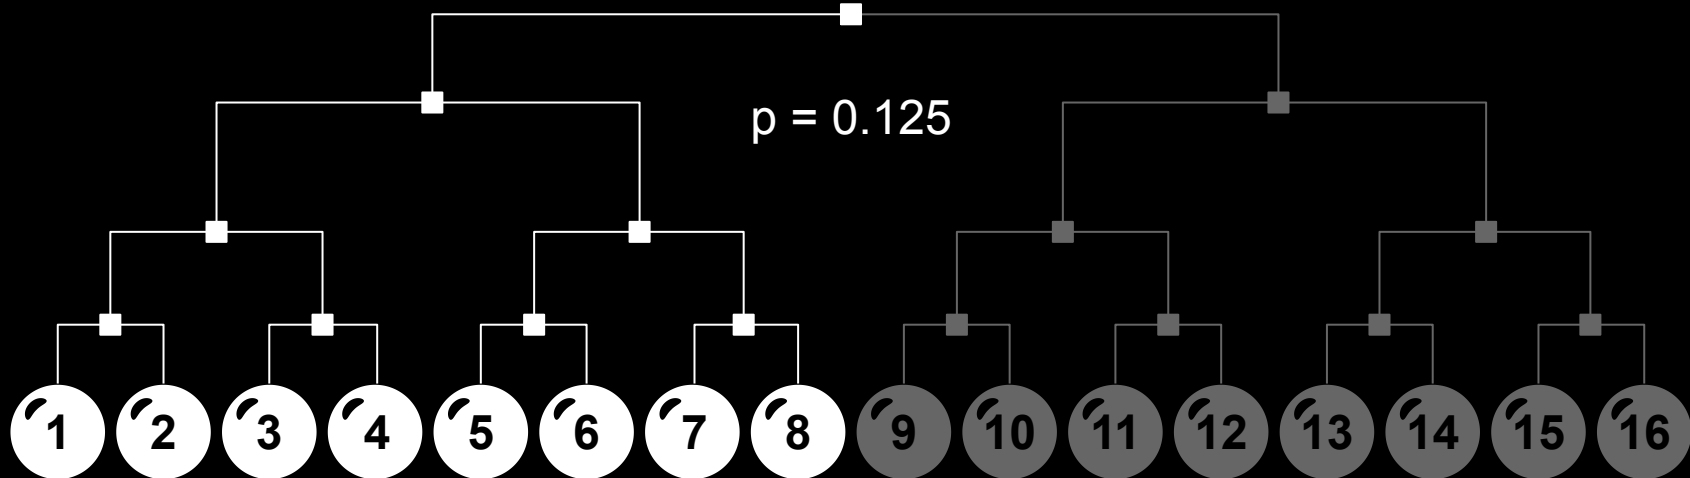

N = 16

where is the information?

~~N = 16~~

N = 8

where is the information?

~~N = 16~~

~~N = 8~~

N = 4

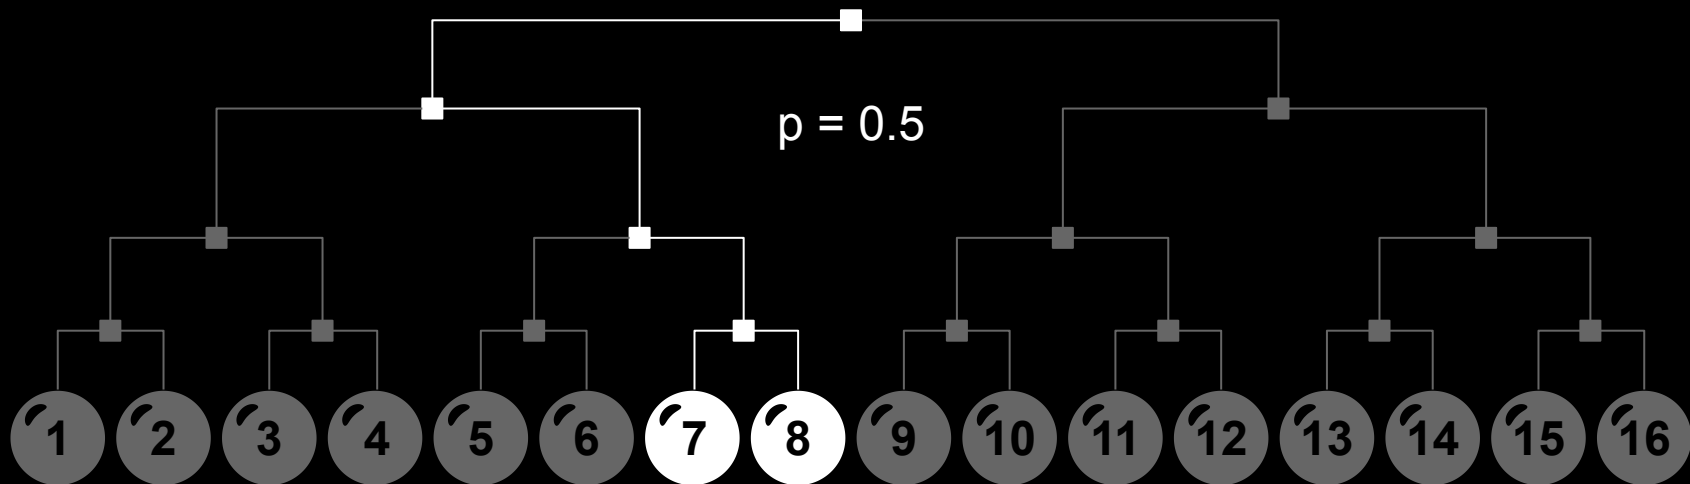

where is the information?

~~$N = 16$~~

~~$N = 8$~~

~~$N = 4$~~

$N = 2$

# where is the information?

~~N = 16~~~~N=8~~~~N=4~~~~N = 2~~

N = 1

information = reduced uncertainty  
uncertainty is measured with the logarithm of N

$$H = \log_2(N)$$

or: how often can we cut the remaining possibilities in half?

$$H = \log_2(N)$$

$$H_0 = \log_2(16) = 4$$

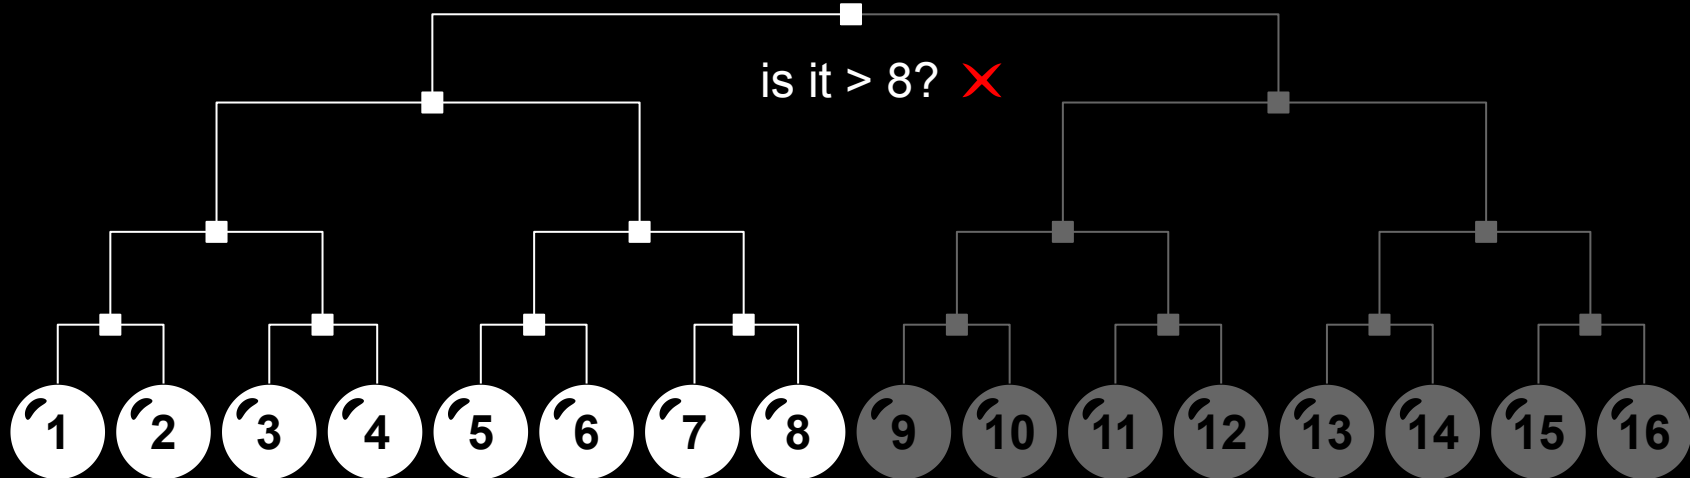

$$H_1 = \log_2(8) = 3$$

$$I = H_0 - H_1$$

$$I = \log_2(16) - \log_2(8)$$

$$I = 4 - 3 = 1$$

uncertainty and information are  
measured in **bits**

how many yes/no questions to reduce  
uncertainty to zero?

$$H = 0 = \log_2(1)$$

how many yes/no questions to reduce  
uncertainty to zero?

$$H = 0 = \log_2(1)$$

$$H = \log_2(N)$$

poker

which card am I holding?

52 card poker deck

A 	2 	3 	4 	5 	6 	7

uncertainty with  $N = 52$  possibilities?

$$H = \log_2(52) \approx 5.7$$

uncertainty with  $N = 52$  possibilities?

average # of yes/no  
questions

$$H = \log_2(52) \approx 5.7$$

one bit of information with each answer...

$$\log_2(52) - \log_2(26) = 1$$

one bit of information with each answer...

$$\log_2(52) - \log_2(26) = 1$$

...that cuts the remaining options in half

is it a spades card?

is it a spades card?

no

is it a spades card?

no

how much information?

is it a spades card?

no

how much information?

$$H_0 = \log_2(52) \approx 5.7$$

$$H_1 = \log_2(39) \approx 5.29$$

is it a spades card?

no

how much information?

$$H_0 = \log_2(52) \approx 5.7$$

$$H_1 = \log_2(39) \approx 5.29$$

$$H_0 - H_1 \approx 0.41$$

is it a spades card?

no

how much information?

$$H_0 = \log_2(52) \approx 5.7$$

$$H_1 = \log_2(39) \approx 5.29$$

$$H_0 - H_1 \approx 0.41$$

that's less than 1 bit

chess

next\_move()

E2 → E4

how much information is  
one move?

next\_move()

E2 → E4

c2 → c4

c2 → c4

c2 → c4

c2 → c4  
c5 → d3

c2 → c4  
c5 → d3  
...

$$c_2 \rightarrow c_4$$

how many possibilities?

# 64 fields x 64 fields

how many possibilities?

$$64 \times 64 = 4096$$

possible moves\*

\*disregarding impossible moves

$$64 \times 64 = 4096$$

$$H = \log_2(4096) = 12$$

$$64 \times 64 = 4096$$

$$H = \log_2(4096) = 12$$

one chess move is 12 bits of information

an alternative way to calculate # bits

c 2 c 4

4 digits

c 2 c 4

4 digits

8 possible symbols per digit

c 2 c 4

4 digits

8 possible symbols per digit  
how many bits per digit?

c 2 c 4

4 digits

8 possible symbols per digit

how many bits per digit?

$$H_{digit} = \log_2(8) = 3$$

c 2 c 4

4 digits

8 possible symbols per digit

how many bits per digit?

$$H_{digit} = \log_2(8) = 3$$

$$H_{move} = \log_2(8) \times 4 = 12$$

$$H_{avg} = \log_2(S) \times n$$

$S$ : number of possible symbols

$n$ : number of digits in our message

$$H_{max} = \lceil \log_2(S) \rceil \times n$$

when calculating bits for storage, we must  
always consider the worst case

drawing balls from an urn

$$p(\text{blue}) = 1/2$$

$$p(\text{green}) = 2/3$$

$$p(\text{red}) = 1/6$$
