“Information is that which allows you to make a
correct prediction with accuracy better than chance.”

information = reduced uncertainty
uncertainty is measured with the logarithm of N

$$H = \log_2(N)$$

or: how often can we cut the remaining possibilities in half?

$$H = \log_2(N)$$

$$H_0 = \log_2(16) = 4$$

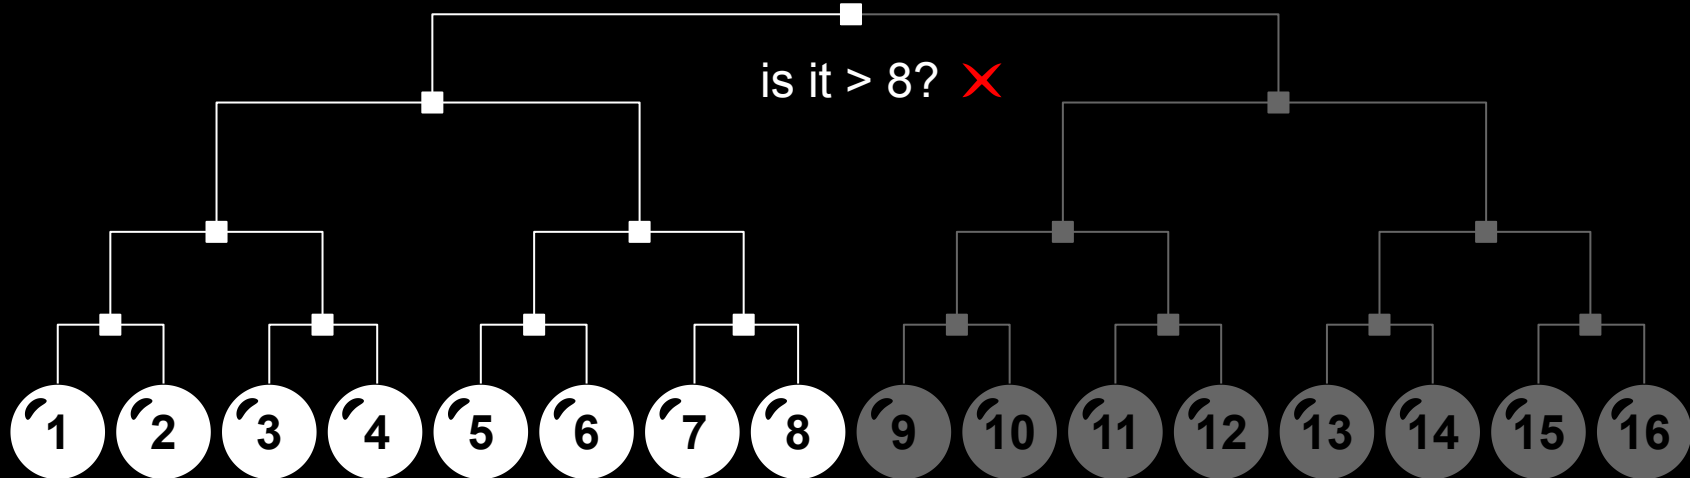

$$H_1 = \log_2(8) = 3$$

$$I = H_0 - H_1$$

$$I = \log_2(16) - \log_2(8)$$

$$I = 4 - 3 = 1$$

uncertainty and information are
measured in **bits**

how many yes/no questions to reduce
uncertainty to zero?

$$H = 0 = \log_2(1)$$

how many yes/no questions to reduce
