

Exercise: Entity Relationship Model

Your Task

Consider the scenario of the online reseller from the previous exercise. Try to create a more formal information model for the scenario description and document it using an Entity Relationship Diagram (ERM).

1. Make yourself familiar with the notation of the ERM!
2. Create a ERM that reflects the company's information requirements! Build upon the result of the previous exercise!

Hints

You can use tools such as Miro, PowerPoint or Google Slides to build an ERM in a digital format. Drawing it on a piece of paper and scanning it later is another viable option.
